WEATHER SYNOPSIS BY REGION

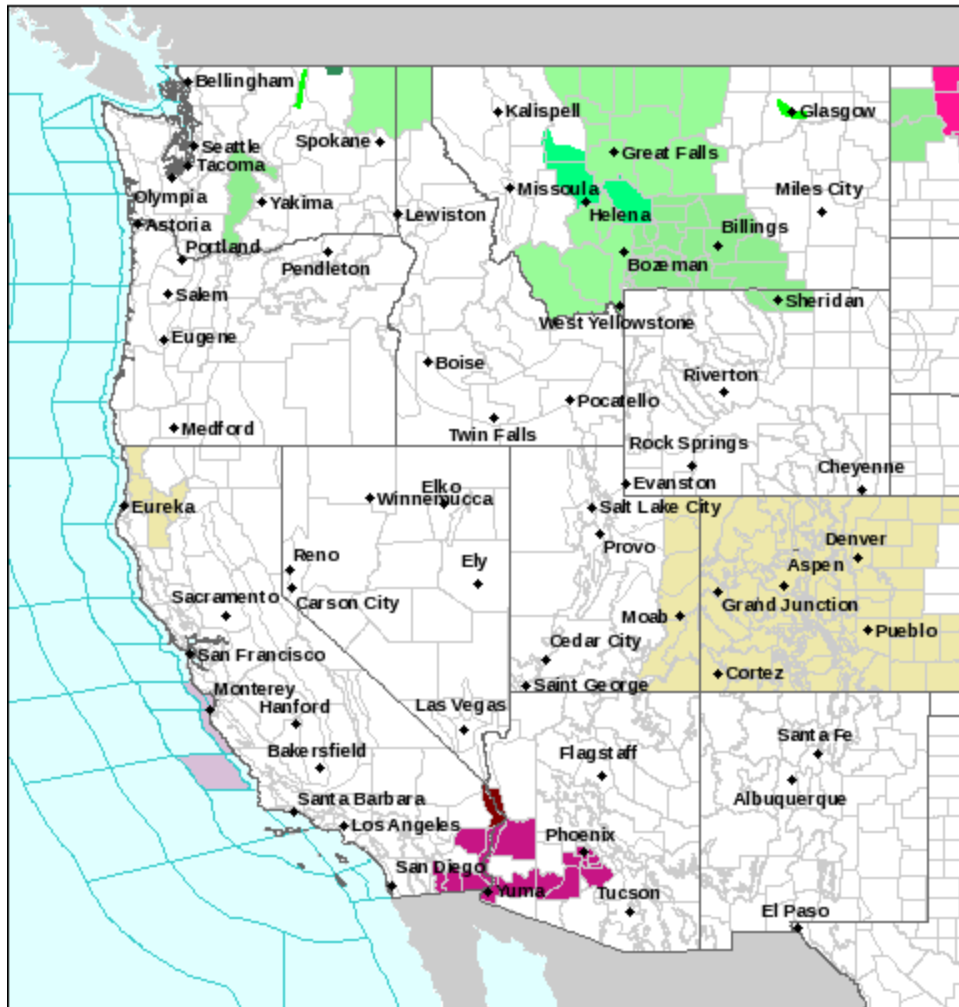

NORTHERN CALIFORNIA

A high pressure ridge moving east over the region today will continue to bring warm, fuel-drying weather. Afternoon temperatures will remain around the mid to low 80s, with the warmest temperatures still around 8-10 degrees above normal in the inland valleys. Light winds will move southerly to westerly through Saturday, becoming a bit stronger on Sunday. A few showers are possible in the northern mountains Saturday night through Sunday night, as a weak weather system moves through the region. Overall temperatures will not be much cooler with this system. The warmest areas will be around the 90s on Monday with high pressure returning briefly over the region. Unsettled weather is expected for the rest of next week. Some showers are possible again in the Northwest (NW) areas later Tuesday into midday Wednesday, and possible rain next Saturday.

SOUTHERN CALIFORNIA

A ridge will bring warmer and drier conditions today through the better half of the weekend. Expect temperatures to jump another 10 degrees over most areas today with highs reaching the 60s in the upper elevations of the mountains to the lower 90s in the valleys. The low desert will see temperatures climb above 100 the next several days. NW winds of 15-25 mph will occur each afternoon along the central coast, especially western Santa Barbara County. Tonight, and again each night through Monday night, north winds up to 30 mph will be possible through Gaviota Pass and nearby areas of the Santa Ynez Range. This will keep relative humidity (RH) recovery poor in this area, but most other areas should see good recovery each night. Minimum RH will fall into the 12-18% range over many areas for 6-7 hours each day this weekend. A trough will gradually approach the area, which will result in a bit stronger onshore flow beginning Sunday. This will bring cooling and some marine layer stratus to the immediate coast, but inland areas will continue to see above normal temperatures. The rest of the area will see an increase in high clouds by Monday, but despite this, expect a large temperature gradient between the coast and the valleys. All-in-all, typical spring weather. Afternoon sea breezes to 15 mph will occur each day next week. A deeper trough may bring cooling to all areas next Thursday and Friday. No offshore winds are expected through the period.
